

Our client is seeking a Data Governance Analyst with a techno-functional background.

This is a full-time opportunity that is hybrid to downtown Chicago.

RESPONSIBILITIES:

- Work closely with Data Domain Owners and SMEs to identify CDE's (Critical Data Elements), define data elements for the Business Glossary and define business rules.
- Identify data sources and build out business glossary collaborating with data owners/stewards, collaborate with data modelers to review definitions of business terms vs technical terms.
- Ability to communicate effectively with Business and Technical SMEs, Architects, Analysts, Developers and other IT and business teams.
- Create, develop, configure and execute end to end business and technical data lineage across disparate sources working with business and technical SMEs/developers understanding the applications system/technical design and create data flow diagrams/data mappings.
- Experience working on metadata management ingesting metadata using metadata bridges/connectors, creating and ingesting custom source to target mappings, custom metadata assets.
- Develop Metadata, Data Lineage and Data Quality Solutions for multiple data sources across On Prem and Cloud environments including but not limited to Kafka, Protocol Buffers, REDIS, APIs, Databases, Flat Files, JSON, ETL/BI Tools and other Data Platform technologies etc.
- Design, Build and Execute Data Quality Rules over the CDEs identified according to the business needs to ensure clean and healthy data.

QUALIFICATIONS:

- Proficient with SQL
- Data Governance Tools example Collibra, IBM ISEE, Informatica etc.
- Bachelor's or master's degree in data analytics, computer science or related field.
- 7+ years of experience in data governance disciplines: metadata management; data quality analysis; data quality remediation; data profiling and data lineage.
